

LiveTimer

The classroom timer that follows your students.

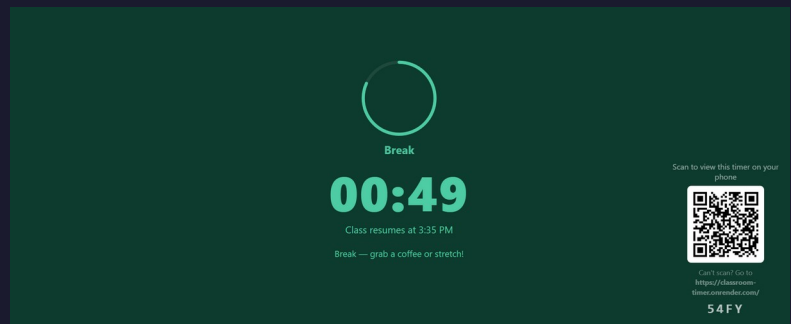

Scan. Count. Go.

Students close their laptop, the timer vanishes. LiveTimer puts the countdown on their phone instead.

Zero Friction

No app. No account. Scan the screen or type four characters. The timer is live in seconds.

Zero Friction

Scan a QR code or type a class code. Done.

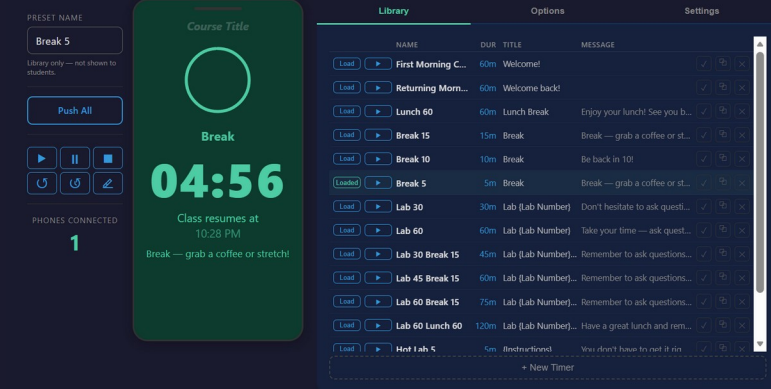

Timer Library

Save your presets. Load in one click.

Duration or Target

Set a countdown or an end time. Add time live.

LiveTimer — Built for virtual instruction

Your Command Center

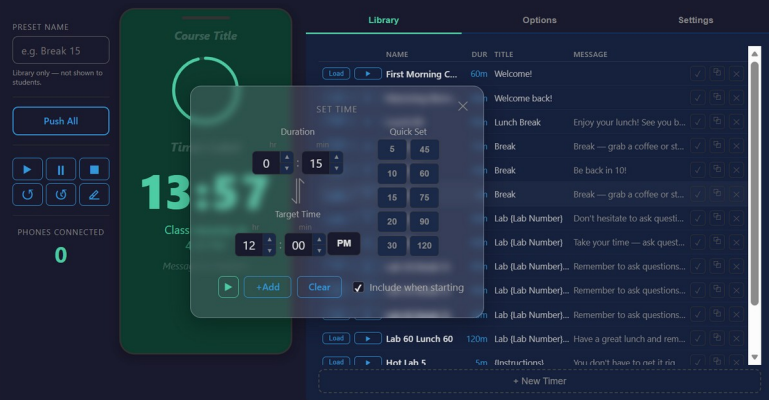

Everything revolves around a phone-shaped preview. What you configure is what students see — live, in real time.

Your timer library sits to the right: every break, lab, and exercise saved as a one-click preset.

Setting the Time

Dial hours and minutes, or pick a target end time. Extend a running timer without stopping it.

The popup floats over your workspace so you can see the timer underneath.

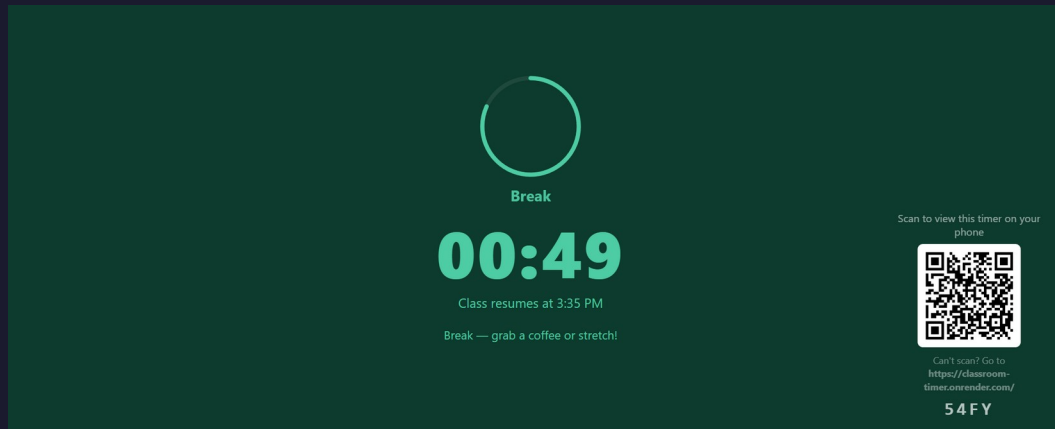

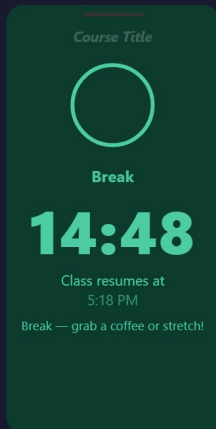

While the Timer Runs

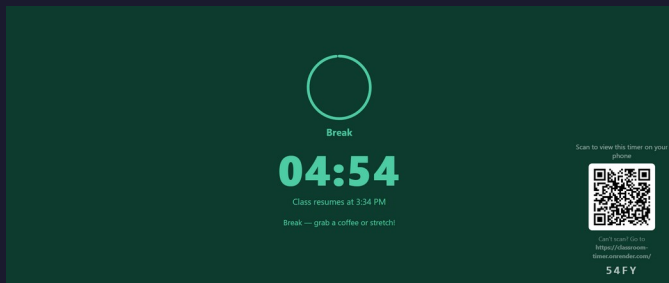

- Push text updates to students mid-countdown.
- OBS modes: transparent background, clock-only overlay.
- Course title persists all day — set it once.
- Class codes keep your session private.

Every Screen, Every Student

Phones, tablets, laptops, projected displays — the same countdown, synced in real time. Students don't need Zoom open.

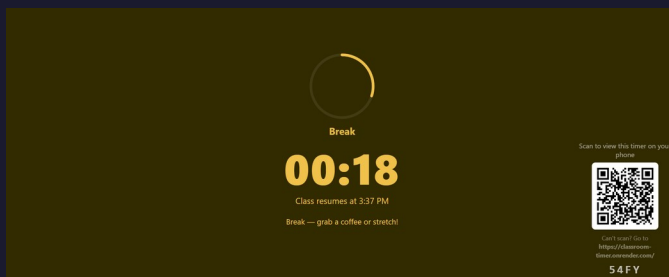

The Colors Tell the Story

Green — Plenty of Time

The default state for most of the countdown. Students see a calm green glow and know there's no rush — they can grab coffee, take a walk, or review their notes.

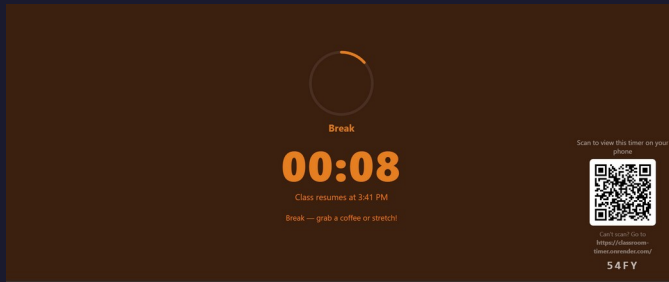

Yellow — Heads Up

A gentle visual nudge that time is moving. Appears at 35% remaining or 10 minutes left, whichever comes first. Students start thinking about wrapping up.

Orange — Almost Done

Down to the wire. Triggered at 15% remaining or 3 minutes left. Students finish what they're doing and head back

to their seats.

Red — Time's Up

The screen pulses red and phones vibrate. Class is resuming — nobody misses the signal, even if they walked away from their desk.

That's LiveTimer.

Lightweight. Fast. No accounts, no installs, no training required. Set it up once, and every break runs itself. Your students always know when to come back — even if they leave the room.
