

LiveTimer

A real-time classroom timer your students actually see.

No app installs. No logins. Just scan and go.

You tell your class "Take a 15-minute break" and half of them come back in 10, the other half in 25. Sound familiar? LiveTimer puts a live countdown on every student's phone — so they always know exactly how much time they have and when to be back.

Instant Access

Students scan a QR code or type a short class code. No accounts, no downloads.

Instructor Control

Set timers, breaks, and labs from one control panel. Push updates in real time.

Visual Countdown

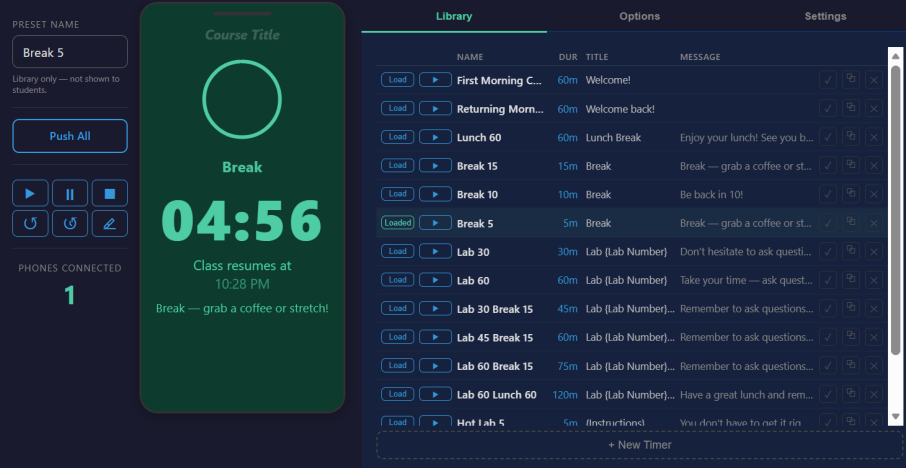

Color-coded progress ring goes green to yellow to orange to red.

How It Works

- 1 You open the instructor panel and set a timer.
- 2 Students scan the QR code on your shared screen — or type a 4-character code.
- 3 Everyone sees a live countdown on their phone. When time's up, it pulses red.

What You See

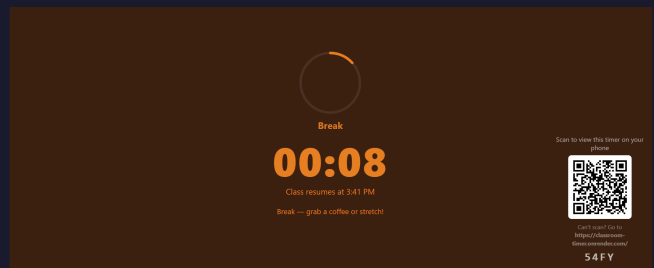

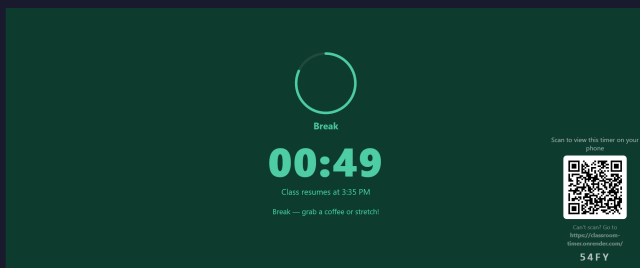

The instructor control panel — everything in one place.

- Phone-shaped preview shows exactly what students see — live.
- Timer library saves your presets (breaks, labs, exercises) for one-click loading.
- Push text updates to students mid-timer without restarting.
- Course title banner stays visible across all timers.
- Display modes for OBS overlays — transparent background, clock-only.

What Students See

Clean, distraction-free countdown on any device.

- Color transitions: green, yellow, orange, pulsing red — students know at a glance.
- End time display — "Class resumes at 2:15 PM" so they can plan.
- Phone vibrates when time is up. No audio needed.
- Works on any phone browser. Nothing to install.

Under the Hood

QR Code + Class Code

Students scan a QR code from your shared screen, or type a 4-character code on their phone. No app, no account.

Timer Library

Save your go-to timers — 15-min break, 45-min lab, 5-min exercise — and load them with one click. Your library syncs across devices.

Smart Color Thresholds

Short timers use percentages. Long timers cap color changes at fixed times (10 min for yellow, 3 min for orange) so students aren't staring at yellow for an hour.

Class Code Security

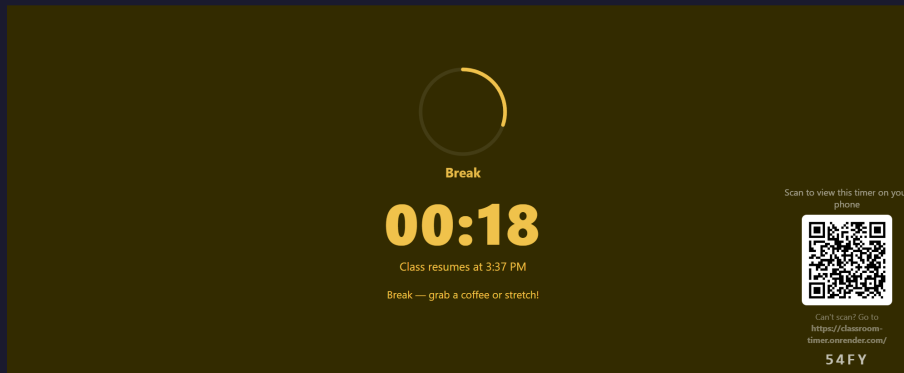

A unique 4-character code keeps random visitors out. Regenerate it anytime to disconnect everyone and start fresh.

OBS / Streaming Ready

Add the timer as a browser source in OBS with transparent background and clock-only mode. Perfect for picture-in-picture during screen shares.

Progress Ring

A circular progress indicator drains as time passes. On long timers, it uses a perceptual curve so the ring is still visually meaningful in the final minutes.

Try It Out

LiveTimer is lightweight, fast, and designed for one thing: keeping your virtual classroom on schedule. No accounts to create, no software to install, no training required. Set a timer and share your screen — that's it.
